

File Organizer Report

Project Title

File Organizer

Objective

The objective of this project was to automate the organization of files into folders based on file type.

Description

The application scans a selected directory and automatically categorizes files into folders such as Images, Documents, Videos, and Others.

Technologies Used

- Python 3
- OS Module
- Shutil Module

Features

- Automatic file classification
- Automatic folder creation
- Support for multiple file types
- Improved directory organization

Program Workflow

1. User provides the folder path.
2. The application scans all files.
3. File types are identified.
4. Files are moved into their respective folders.

Output

Files are successfully organized into structured categories.
